WOOD COMBUSTION HEATING

When some people wanted a different Nectre, we agreed to bend a little

You're probably familiar with the traditional Nectre heater with its simple, elegant but solid straight lines. After all it is one of Australia's most popular combustion heaters. However, we recognise that some people want a slightly different look. Perhaps a few more curves. That's why our designers have introduced a convection heater with a new look. They've added subtle curves and all of the 500 and 800 range have fans to spread the warmth around your home. But one way we refuse to bend is in our uncompromising standards of quality.

Features include:

- Fully welded steel fire box with 25mm firebricks
- Steel removable baffle plate
- Large self-cleaning glass door
- 3-speed high quality fan
- Proudly Australian made
- 10 year warranty (limited)
- Tested and approved to Australian and New Zealand relevant standards.
